ONYX 11.1: New Features, Functionality and Benefits

ONYX 11.1 provides new features, functionality and key maintenance items, including streamlined and simplified job setup, print & cut workflow, cut-only function, and profiling for expanded ink sets.

Print & Cut Workflow

- *Cut Path Previewing improves production output predictability with the ability to preview the cut paths in Job Editor, RIP-queue & job properties*
- *Cut-only functionality enables cutting directly from CUT-Server when printing is not required*

Streamlined & Simplified Job Setup

- *"Reflect at Print Time" workflow option saves time in printing of transfer applications by nesting and grouping like jobs which can be automated with ONYX Quick Sets*
- *Mirroring images in Job Properties and Quick Sets streamlines the job preparation workflow*
- *Automate spot color replacement for specific print modes with device values to ensure pinpoint accuracy*
- *Job Properties now include the ability to directly set image width and height and previews stretched images*
- *Lock crop size feature makes controlling and defining crop areas in Job Editor quick and easy*

Color Profiling

- *ICC color profiling is now a standard feature in ONYX PosterShop giving users the ability to optimize their color output*
- *Control the starting points of HiFi inks during profile creation to improve output quality without sacrificing color*
- *New ink restriction and multi-channel ink limit swatches simplify profiling with spot and specialty inks*

Adobe® PDF Engine 3 for ONYX Thrive

- *The next generation rendering platform from Adobe® which is optimized for end-to-end PDF workflows*
- *Combines performance optimizations with a new scalable framework to power large format printers*

New Textile Specific Features

Step & Repeat, Colorways, Ink Configuration Builder, and Swatch Books for RIPCenter are now available as an optional add-on module to ONYX 11.1 products.
